Subject: TYC CABIN AIR FILTER STOCKING GUIDE

Cabin Air Filters

Filters are offered in one of two configurations to provide superior performance with a precise fit: Particle Filter (single-stage) and Combination Filter (with additional carbon layer to remove odor). When replaced on a recommended interval of every 12,000 miles, the filter protects passengers by eliminating nearly 100% of exhaust pollutants and airborne contaminants, and enables peak operating efficiency of the vehicle's HVAC system. Considerable market growth is expected as consumer awareness and install base continue to increase
