TECHNICAL TRAINING SEMINARS

Three new Motorcraft Technical Training courses will be offered in 2010:

In 2010 Motorcraft University continues to bring you comprehensive technical training on the latest vehicles and systems in the Ford inventory! This year we are proud to introduce three brand new training courses. These include:

6.4L and 6.7L Diesel Components and Operation – Launching in May 2010, this new course will cover the components, operation, diagnosis and service of the Ford 6.4L Diesel Engine found in many late model trucks and vans. Additionally, this course will also detail the components and operation of the new Ford designed and built 2011 6.7L Diesel Engine. This engine utilizes the latest diesel technology including the new Selective Catalyst Reduction (SCR) system.

Integrated Diagnostic Software (IDS) Scan Tool Operation and Utilization – Many aftermarket Service Technicians are finding that aftermarket scan tools are lacking in critical areas when diagnosing Ford Cars and Trucks. As a result, many have purchased the Ford IDS scan tool. From this course you will learn how to maximize your utilization of the IDS for diagnosis. In addition, the course will describe how to use the IDS software and perform diagnostic tests using its Vehicle Communication Module (VCM) and Vehicle Measurement Module (VMM). Look for its launch in August 2010!

Advanced Engine Operation and Drivability – This all new technical training course will provide you with insights into the technology of many of the new systems found on today's vehicles! This course will describe the components and operation of the New Ecoboost® Ford Powertrain that is setting a new standard for engine performance. It will also cover Variable Cam Timing (VCT), advanced emissions, new Diagnostic Trouble Code meanings and interpretations, and more. Launching in October 2010 this advanced drivability course will arrive in time for the winter driving season!

For more information, or to submit a training request, please contact mctrain@ford.com.

Cost: \$1,600 for the first training day (\$1,100) for each additional day, up to 4 days).

Distributors will be billed on their monthly parts statement upon training completion.

Aftermarket promotion funds may be used to offset training costs.
